

## SCORPION Hydraulic Access Cover Lifter

### The RhinoMax Scorpion

Light and easy to use this Australian designed and manufactured access cover lifter enables anyone to quickly and safely remove almost any design of cover.

Heavy covers that have seen extensive corrosion and traffic movement often require substantial force to remove them from their seat. With a lifting capability of over 900kg the scorpion makes this a safe and easy task.

The Scorpion can lift from 65mm below the road surface to 250mm above floor level, this helps with covers which have sunk or on uneven ground.

The Scorpion can be assembled and dismantled in under a minute and only weighs 25kg making it easily transportable in a small vehicle.

With a wide range of keys and spreader bars available the Scorpion can be tailored to your specific requirements.

Currently being use by various Councils, water authorities, Mine sites, power stations and port authorities the Scorpion is proving to be a powerful and portable addition to any tool box.

### Benefits

- Reduced time and effort required to lift heavy covers
- Significantly reduces the risk of manual handling and back strain injuries.
- Single person operation
- Remove lid safely away from work area
- Assemble and dismantle in under a minute
- Easily transported
- 10kg heaviest part for safe and easy lifting
- Can lift sunken lids below ground level with ease.
